

## **Manlift Ticket Alberta**

Manlift Ticket Alberta - The Elevated Platforms and Manlifts Certification program helps to provide the required training on the safe operating procedures, work practice, rules and regulations regarding the daily activities for the operators of this machinery. The program has been designed for individuals who are actively involved in these activities or those who have a basic understanding of this equipment.

manlifts and aerial platforms have become integral and common machinery in industrial settings in the past few decades. These equipment provide an easy way to lift employees close to what has to be carried out on a stable platform apparatus, allowing staff to carry out tasks with greater comfort and safety rather than being perched on top of scaffolding or ladders.

Similar to every other tool, manlifts are only safe when they are utilized correctly. Since they elevate employees above ground level or floor, accidents can take place easily and this may cause serious death or injuries for both the operators of the manlift and any passerby who may not be lucky enough to be standing underneath.

There are various types of manlifts. Nearly all fall into 1 of 2 categories: the articulating boom lift, that has the capability of both vertical and horizontal movement and the scissors lift, which is capable of moving up and down.
