

## Crane Safety Training Alberta

Crane Safety Training Alberta - Both crane driver and their supervisors have to be aware of all the possible problems associated to the operation of an overhead crane. All over North America, there is legislation which provides rules for the safe inspection, maintenance and operation of lifting machines. Crane Safety courses really help crane managers and owners accredit their drivers in accordance with provincial legislation.

Our operator safety training course will provide the crane operator trainee with the essential skills and knowledge to make lifting with a crane safer and easier. Training the driver helps to lengthen the life of cranes by guaranteeing high performance and safe operation of the crane.

Accredited operators are required to run and operate articulated cranes under 16,000 lbs. capacity. The articulated crane driver should have knowledge about the many operational features and characteristics of the equipment. Prior to use, a pre-operational equipment check has to be performed. There is a legal prerequisite to do a pre-operational inspection as well as an inspection of the overhead conditions and work-site ground.

The manufacturer's instructions provide information concerning inspection and maintenance, unloading and loading of the crane. The law requires annual and daily checks. Operators need to maintain an up-to-date logbook within most places. They might be needed to validate machine warranties.

It is suggested that businesses add remote control devices to their cranes. Remote control improves safety by allowing the driver an easier option for handling the crane.

Placing a high priority on crane safety helps a company's bottom line. Companies that follow safe machine practices generally enjoy bigger cost savings than those that don't. The chance of personal injury and machine damage is very much lessened when a well trained driver is handling the crane. Safety conscious drivers are more productive leading to reduced times needed for loading and unloading.
