

## **Manlift Operator Certification Alberta**

Manlift Operator Certification Alberta - Our scissor platform and aerial lift certification and training empowers participants with a general understanding and knowledge of the safe and efficient utilization of "Power Operated Mobile Work Platforms," under all of the existing regulations in the business. Upon successful completion of training, the participants would be able to know and understand specific safety and health related hazards associated with using scissor and aerial lifts.

There are different affiliated places in your area offering Manlift Operator Certification Programs. Those training are provided with in-depth instruction about safe utilization and rules together with extensive hands-on training. The skill level and knowledge of each and every person training is evaluated and individuals who are capable of demonstrating an acceptable level of operational competence would be given Operator Certification cards and employee documentation.

### **Theory Training**

The trainer will help the one training through a review of the theory training using a lot of visual aids. The one training would work out of a course book which includes all the necessary regulations. Other topics like for example safe operating procedures, different machine kinds in addition to different associated applications and sizes, general work place safety and pre-use checks are explored individually.

### **Theory Evaluation**

The Theory Evaluation starts with a written exam based upon the concepts covered in the operator's reference instruction manual. These tests are graded and returned to the ones training. After that the tests are reviewed to ensure understanding and a minimum score of 70 percent is considered necessary in order to pass this part of the training.

### **Practical Training**

The practical training is included in the hands-on part. It is here that the trainees are shown the safe operating measures, like the parking and shutdown procedures and the pre-use inspection measures. Each and every one training has the chance to operate the machinery and practice the skills they learned throughout Theory Training under the helpful eye of the program trainer in a setting that is safety controlled.

### **Practical Evaluation**

The Practical Evaluation is where the trainees are evaluated to assure they have reached a minimum level of skill. The ones training are then assessed on an individual basis using the machine in a reasonably difficult course setting. When the assessment is finished, the ones training are de-briefed and given the opportunity to address any problems they may have about whatever part of the course. Each successful trainee's employer would be given the official documents and records soon after the program has been completed.
