

## Aerial Lift Training Alberta

Aerial Lift Training Alberta - The mechanical access platform known as an aerial work platform is a device that provides access to places which are otherwise not accessible to people and other equipment. Likewise known as an elevating work platform or aerial device, the device is usually used to be able to access high areas. Construction and maintenance staff normally should utilize aerial work platforms on the job. They are used by firefighters for emergency access.

The aerial work platform is meant to temporary application, providing access to high places. They are designed to be operated by one person, with the capability of lifting weights of less than one ton. Some kinds have higher load limits. There are various kinds of aerial work platforms; like for example, there is a "scissor lift" and a "cherry picker".

Various aerial work platforms come equipped together with compressed air connectors for power tools or electrical outlets. For specialist tasks, like for example lifting frames for window glass, an aerial work platform may come with special tools.

Anyone needed to operate an aerial lifting machinery requires training, together with their supervisors. Members of Health & Safety Committees and representatives responsible for inspecting aerial device work places likewise have to undergo training. Trainees will learn how to operate an aerial lift machine. They will also gain an understanding of the rules which apply to the safe use of these machinery. Rules vary in various provinces, and within worksites that are federally regulated.

Anybody who is required to be lifted by or work near an aerial lifting machinery should be told about potential dangers. In a general safety session, an Aerial Lift Training Video can be shown to be able to educate all of the employees who are lifted by them or work near them.

Aerial Lift Training Program comprises modules focused on the following: Aerial Lift Devices and Operating Controls; Hazard Identification; Platform Positioning & Park Positioning and Pre Operational Checks for Aerial Lift Devices. The particular program is designed to train staff on the safe operation of self-propelled, boom supported elevated work platform and self-propelled, elevated work platform. Employees who complete the program will receive a certificate, signed by a qualified person to verify the successful completion of a hands-on practical exam.
