

Forklift Instructor Training Alberta

Forklift Instructor Training Alberta - For those lift truck operators who would like to become a lift truck instructor it is recommended that they finish a forklift Instructor training certification course. Entry qualifications for the forklift instructor training requires the lift truck operator to have extensive knowledge regarding forklift machinery and skills driving forklifts. Instructor training normally is held at an equipment sales facility or at the campus of a community college, junior college, or vocational or technical school. Forklift manufacturing businesses sometimes provide hands-on, train the trainer, practical programs.

Whether provided in a classroom environment or at a manufacturing business facility, registering for the course would involve paying a tuition fee, and purchasing books, manuals or other materials. Program length differs depending on the course. Individuals participating usually must have satisfactory participation, demonstration, and test scores throughout the program to be able to qualify for trainer certification.

Instructor courses normally assume that those participating have previous experience as forklift operators. The focus of the instructor training is on subjects such as ethics, teaching techniques, safety issues and curriculum design. Those participating will learn how to demonstrate to their students different aspects of lift truck operation, such as moving and stacking materials or navigating the lift truck in narrow aisles. Those participating will learn how to assess student's written tests and demonstrations of their forklift operating skills. The course objective is to be able to prepare trainers to be able to design and execute their very own forklift training courses.

Some self-study of the equipment and instruction manuals is required. Trainers would be expected to make their own curriculum, which meets regulation guidelines in terms of topics presented, like for instance Safety and Operation. Like for instance, the topic of Safety must comprise an understanding of how to identify possible hazards. The subject of Operation includes instruction about connecting and using, controls and instruments and maneuvering and steering the fork.
