

## **Warehouse Forklift Training Classes Alberta**

Warehouse Forklift Training Classes Alberta - The reason for warehouse training classes are to raise the awareness of common workplace dangers. The trainees will learn essential warehouse safety measures. An emphasis is placed on paying attention to risk factors that are potential causes of accidents. The goal of the classes is to produce staff who follow safety rules, resulting in fewer accidents in the warehouse.

### **Introduction**

Warehouse operations which are orderly and efficient tend to be safer and more successful. It is necessary for the employee to transport and store the merchandise throughout the facility in an efficient and timely way. Due to the numerous activities involved within warehouse operations, employees in warehouse settings might be at greater risk for accidents than people who work in areas with more limited activities. Thus, businesses place a top priority on warehouse safety.

Knowledge of possible warehouse dangers is key to preventing accidents. Always be alert to potential dangers and methods to reduce risks. Do whatever is required to avoid accidents.

### **General Hazards**

Common types of hazard in a warehouse environment are falls, slips and trips. These accidents are often caused when employees lose their balance or stumble over a thing which has not been put away properly. Removing or placing things from storage could result in a fumble or slip, possibly causing both employee and thing to fall. The potential for slips, trips and falls is increased when staff are moving materials on various types of floor surfaces and on various levels. One more common hazard is getting hit by falling objects. This is usually caused by failure to properly stack things on shelves and other surfaces. Back injuries due to incorrect lifting methods are another common hazard.

There are inherent risks in using and working around workplace equipment. Accidents can normally be caused from the incorrect use of conveyors, hand trucks and forklift trucks. Warehouse tools, such as skids, pallets, cutting and strapping tools, must be utilized carefully in unpacking, packing and loading.

Materials which are dangerous, flammable or combustible present another type of workplace hazard while being stored inside a warehouse. Employees must know how to take steps to protect themselves from health hazards while working around hazardous materials.
